

LAKSHMAN NAIR

647-907-5223 | lakshmannair7@gmail.com | [Portfolio](#)

Professional Summary

Full-Stack Systems Developer & UofT CS Specialist with expertise building production-grade ERP features, data visualization engines and automated testing. Proficient in TypeScript, Python, React, PostgreSQL and AI-accelerated agentic workflows.

Work Experience

Junior Full Stack Systems Developer

May 2026 – Present

Clearway Construction Inc.

- Independently designed, architected, and shipped **end-to-end expense management** application for **~600 employees** using React, TypeScript, Django, PostgreSQL, and Docker, automating approval workflows and corporate VISA statement reconciliation, reducing **15+ hours per month** of manual finance operations
- Engineered GIST, a React/TypeScript **geospatial analytics platform** for upper management that processes large-scale JSON datasets into interactive Leaflet visualizations and **analytics dashboards** for executive decision-making
- Reduced interaction latency by **400-500ms** across core ERP pages by optimizing **React Query cache sharing**, query key management, invalidation strategies, and eliminating N+1 backend queries
- Implemented **PyTest testing suite** with **500+ tests** within CI pipeline, establishing automated validation of backend services and improving **system reliability** and release confidence
- Led adoption of **Claude Code agentic workflows** and steering files across a **6-person team**, accelerating prototyping while standardizing development practices & improving team productivity

Frontend Developer

May 2025 – August 2025

Rays Sports Network Inc.

- Engineered complex, **cross-platform UI components** (dashboards, tabbed content, video players) using Vite, Node.js, React.js, and Tailwind CSS to align with Figma prototypes
- Built a collection of 10+ reusable **React hooks** and API utility functions with **JavaScript**, Axios, and React Query to streamline data fetching, state management, and backend integration across modules
- Implemented **automated testing** scripts in Python with Selenium, validating **80% of core user flows** and strengthening application reliability through end-to-end testing
- Leveraged Git-based workflows and **Agile code reviews** to maintain code quality and streamline team collaboration

Software Engineer

January 2025 – April 2025

MyEdMaster LLC

- Engineered backend services using REST APIs in JavaScript with Next.js to support seamless integration with the React frontend, improving user functionalities and customizability
- Collaborated on the development and deployment of a fitness web application, available at <https://teamrocketaifitnessappd4.vercel.app/>

Education

University of Toronto

September 2022 – June 2026

- Honours Bachelor of Science, **Computer Science Specialist** program
- Relevant Coursework: Software Design, Systems Programming, Introduction to Databases, Programming on the Web, Neural Networks and Deep Learning, Natural Language Programming

Projects

Agentic AI Web Automation Engine

- Architected an **autonomous agentic medical form filler** using TypeScript, Playwright and a Gemini API to navigate the DOM of complex medical forms with 100% submission reliability

Technical Skills

- Languages: Python, TypeScript, JavaScript, Java, C, SQL
- Frameworks & Technologies: React, Node.js, Vite, Tailwind CSS, REST APIs, PostgreSQL
- Cloud & Tools: Docker, AWS, Terraform, Git, GitHub Actions (CI/CD), Bash, Playwright, PyTest
